

Rahul Kornepati

SDET · QA Automation Engineer · Manual & Automation Testing · Automotive IVI
Hyderabad, India · +91 6303871006 · rahulkornepati@gmail.com

PROFESSIONAL SUMMARY

SDET with 2+ years of hands-on experience in manual and automation testing across web, mobile, and automotive IVI platforms. Skilled in executing Smoke, Sanity, Regression, Functional, Integration, Exploratory, and UAT test cycles. Developed scripts and delivered 40% regression runtime reduction, stabilized 150+ flaky scripts (+35% reliability), and owned end-to-end STLC across 10+ sprints. Leveraged AI-assisted development tools (GitHub Copilot, Ford internal LLM) to accelerate test authoring and boost productivity.

CORE SKILLS

Languages	Python · SQL
Automation	Selenium · Appium · Playwright · Pytest · Squish Qt · Slash Framework · Page Object Model (POM)
Testing Types	Regression · Smoke · Sanity · Functional · Integration · UAT · Exploratory · Ad-hoc
API / BDD	Postman · Python Requests · REST API · Cucumber · Gherkin · BDD
Automotive/IVI	HMI Testing · Android Automotive · CAN Protocol · ECU Validation · Head Unit · ADAS
CI/CD & DevOps	Jenkins · GitHub · Docker · Containerized Test Execution · Git
AI Tools	GitHub Copilot (PyCharm) · Ford Internal LLM · AI-assisted Test Generation
Methodologies & Tools	Git · SDLC · STLC · Testing Methodologies · Code Reviews · JIRA Bug Tracking · TestRail · Agile/Scrum

EXPERIENCE

Test Automation Engineer (SDET) — Wipro Technologies

Jun 2024 – Present

Client: Ford Motor Company

- Manual testing:** Owned the complete SDLC and STLC from initial requirements analysis and executed end-to-end Smoke, Sanity, Regression, Functional, Integration, UAT, and Exploratory test cycles across web portals, Android mobile apps, and Ford IVI head units; logged and triaged 100+ defects in JIRA across 10+ sprint releases.
- Automation framework:** developed and maintained a modular Python automation framework (Pytest + Slash) with parallel execution, reducing regression runtime by ~40% and boosting pipeline throughput; adopted across multiple teams.
- Script engineering:** developed 70+ automated scripts (Python, Selenium, Appium, Squish Qt) for functional, regression, integration, and UI coverage across web, Android/iOS mobile, and IVI platforms.
- Flaky script remediation:** debugged and refactored 150+ flaky scripts, improving execution stability by ~35% and eliminating nightly false-failure noise across CI runs.
- Automotive IVI validation:** delivered full head-unit QA on Ford vehicles — HMI, audio/media, navigation, Bluetooth/USB, Android Automotive, climate control UI, and ADAS across multiple vehicle platforms.
- CI/CD & DevOps:** integrated test suites into Jenkins and GitHub (PR + sprint merge triggers); Dockerized 4+ environments to eliminate environment-specific CI failures.
- BDD & API testing:** built Playwright cross-browser suites (Chrome, Firefox, WebKit) and 3+ Cucumber/Gherkin BDD modules; validated 20+ REST endpoints with Postman + Python Requests; authored SQL queries for data integrity across microservices.
- AI-assisted productivity:** integrated GitHub Copilot within PyCharm IDE to accelerate test script authoring, and reduce manual coding effort; utilised Ford's internal LLM tool for rapid test case generation, defect analysis, and documentation — improving overall team velocity.

★ **Achievement: Wipro Habit Flagbearer Award** — outstanding contributions to the Ford Motor Company engagement.

EDUCATION

B.Tech — Computer Science & Engineering

Sri Krishnadevaraya University, Anantapur

2018 – 2022 | 71%
